

Martin Rodriguez

Backend Engineer · Node.js · Distributed Systems · AI/LLM Integration

+595 992 820631 | rodriguezmartinv02@gmail.com | github.com/MartinGIT | Paraguay (Open to Remote — UTC-4)

PROFESSIONAL SUMMARY

Backend Engineer with 3+ years of hands-on experience architecting and shipping production-grade APIs, event-driven microservices, and AI-powered systems. Proven track record across full-cycle backend development — from database schema design and query optimization to cloud deployment on AWS and asynchronous messaging with RabbitMQ. Built RAG pipelines and LLM-integrated applications using FastAPI and vector databases. Comfortable owning services end-to-end in fast-moving startup environments. Available for fully remote roles with international teams.

CORE TECHNICAL SKILLS

Primary Languages: JavaScript / TypeScript (Node.js), Python, Java, C

Backend & APIs: Node.js, Express.js, FastAPI, Django, REST, event-driven microservices

Messaging & Queues: RabbitMQ (event coordination, async service decoupling)

Databases: PostgreSQL, SQL (PL/SQL, composite indexes, normalization), vector databases (pgvector, Chroma)

Cloud & Infrastructure: Amazon AWS, Linux server administration

AI / LLM: RAG architecture, LLM API integration, vector embeddings, semantic search

Frontend (supporting): React, Angular, PHP, HTML/CSS

DevOps & Tooling: Git, GitHub, Bitbucket, PR review workflows, SOLID principles, design patterns

Legacy / Enterprise: Delphi (ERP maintenance), PL/SQL (Oracle)

PROFESSIONAL EXPERIENCE

Backend Engineer · Rasp S.A.

October 2025 – Present · Remote

- ▶ Maintain and optimize a suite of Node.js microservices in a production environment, ensuring reliability and performance at scale.
- ▶ Architected and implemented event-driven workflows using RabbitMQ, enabling reliable async communication across distributed services.
- ▶ Delivered measurable query performance gains by introducing composite indexes and rewriting critical SQL hot paths.
- ▶ Designed and modeled relational database schemas applying normalization techniques to ensure data integrity and long-term maintainability.
- ▶ Applied SOLID principles and established design pattern standards across the codebase, raising code quality benchmarks for the team.
- ▶ Led Pull Request reviews and enforced engineering best practices, serving as a technical gatekeeper for service changes.
- ▶ Created net-new backend services from greenfield to deployment, owning architecture decisions and delivery timelines independently.

Backend & Cloud Engineer · Datapar S.A.

December 2024 – September 2025

- ▶ Developed and maintained enterprise business logic through complex PL/SQL stored procedures and queries on Oracle databases.
- ▶ Deployed and managed backend services on Amazon AWS, contributing to cloud infrastructure modernization initiatives.

- ▶ Maintained and extended a production ERP system built with Delphi, resolving critical bugs and implementing feature enhancements for business operations.

Freelance Backend & Full-Stack Engineer · Independent

December 2023 – December 2024

- ▶ Designed and delivered a document processing pipeline for credit bureau data (Equifax / BISCA) using Node.js, handling parsing, normalization, and structured output generation.
- ▶ Built end-to-end RAG (Retrieval-Augmented Generation) systems integrating third-party LLM APIs with vector databases via FastAPI, enabling semantic document search and Q&A over private data.
- ▶ Developed modular React frontends and paired Node.js backends for multiple client projects, owning the full stack from API design to UI delivery.
- ▶ Managed client relationships, scoped deliverables, and operated autonomously across all phases of the software development lifecycle.

KEY PROJECTS

RAG Document Intelligence System

Built a production RAG pipeline enabling semantic search and conversational Q&A over large proprietary document corpora. Stack: FastAPI · LLM API integration · vector database (embeddings storage and retrieval) · Python. Delivered as a standalone API service consumed by a React frontend.

Credit Bureau Document Processing Pipeline

Engineered an automated pipeline to ingest, parse, and normalize structured credit reports from Equifax and BISCA data feeds. Built in Node.js with a focus on correctness, error handling, and auditability. Enabled downstream risk analysis workflows for client operations.

Event-Driven Microservice Platform (Rasp S.A.)

Actively contributing to a distributed backend system using RabbitMQ for inter-service messaging. Responsibilities include service creation, SQL optimization, schema design, and enforcing engineering standards through code review.

EDUCATION

B.Eng. in Computer Science (Information Technology) — Universidad Nacional de Asunción

2022 – Present · Currently in 7th semester

Technical Baccalaureate in Industrial Electronics — Centro de Capacitación Técnica de Luque

2019 – 2021

TECHNOLOGIES & TOOLS

Node.js · TypeScript · Python · FastAPI · Express.js · Django · React · Angular · RabbitMQ · PostgreSQL · PL/SQL · Oracle · AWS · Docker (exposure) · Git · GitHub · Bitbucket · Linux · REST APIs · Vector Databases · LLM APIs · RAG · Delphi · PHP
